Robe Hits The Spot for Nina Badric Concert

Products Involved

MMX Spot™

Croatian pop star Nina Badric kicked off her latest tour with a gig at the Drazen Petrovic Hall in Zagreb in front of 5000 enthusiastic fans.

The lighting rig was designed by Dalibor Radic and included 24 Robe MMX Spots were central to the look and feel of the show. They were supplied, along with the rest of the technical production package, by leading creation rental company Eldra, based in Bregana.

Over 200 metres of trussing was installed for the show to provide positions for lighting, PA and LED screens.

It was Dalibor's first work for the artist and her 11 piece band, and his brief was to make the stage as dynamic as possible with lots of big, bold pop-tastic looks, colour and moment to cover the lively largely up-tempo performance.

He specified the ROBIN MMX's because off their massive light output, the fabulous dual graphics / animation wheel and other effects, the low weight and speed..... and most importantly – reliability.

Dalibor has been using Robe products for about a year now and is very impressed all round. Also appreciating the quality engineering and the fact that they are constantly in demand as a rental stock item, is Eldra's co-owner Damir Drazic.
