**Test Report**

**NOISE MEASUREMENT**

**Name and address of submitter (customer):**
ROBE lighting, s.r.o., Hážovice 2090, 756 61 Rožnov pod Radhoštěm, The Czech Republic

**Identification:**
Moving Head ROBIN Pointe

**Serial No.:**
1300390535

**Producer:**
ROBE lighting, s.r.o., Rožnov pod Radhoštěm, The Czech Republic

**Technical documentation:**
--

**Date of entrance test:**
13 December 2013

**Test method:** ČSN EN ISO 11 201 1)

**Date of test, place of test:**
13 December 2013
Semi-anechoic chamber
site VTUPV Vyškov

**Tests leader:** Jiří LENIKUS

**Test carried out by:** Jiří LENIKUS

**Issue date:**
15 January 2014

**Authorized by technical manager:**
Ivan ŠTUCHAR

---

**Test results:**
The sound pressure levels emitted by the equipment during determined operation conditions (three operation modes), on determined measurement places (the distance from the equipment centre - 1 m; 5 m and 10 m).

<table>

The expanded measurement uncertainty is a product of a measurement standard uncertainty and a coverage factor $K=2$, this corresponds to a coverage probability 95 % for a normal distribution.

**Notes:**
This test report is translation of Czech version of test report No. 194200-5/2014. In the case of difference is valid Czech version of test report.

1) This standard is the Czech version of the European Standards.

---

The results contained within this report relates to the tested item only. This report shall not be reproduced except in full, without written approval of testing laboratory.
1 TEST CONDITIONS

- Test conditions of the test equipment:
  - stationary conditions, with determined operation conditions (three operation mode):
    1. operation mode – stationary-basic mode, lamp is switched on,
    2. operation mode – dynamic mode with rotation movement (Pan, Tilt) and effect
       (Zoom, Prisma, Rotating gobo wheel, Static gobo wheel, Color, Dimmer, Frost),
    3. operation mode – dynamic mode with rotation movement (Pan, Tilt) and effect
       (Zoom, Prisma, Rotating gobo wheel, Static gobo wheel, Color, Dimmer, Frost),
       maximum ventilator speed (High mode).
  - the equipment was placed on a wooden table (distance from floor – 0.8 m, table
    desktop dimension: 1.0 m × 1.5 m × 0.035 m),
  - the equipment front panel (control panel) and the side part of the moving head was
    turned towards the microphone for 1. mode measurement, head is rotating (in 2. and
    3. mode),
  - the equipment was placed in the centre of the test room (as possible),
  - the equipment was placed on one-reflective plane, in an indoor environment,
    in the semianechoic chamber – Figure 1,
  - the equipment basic dimensions: length – 0.364 m, width – 0.250 m, height – 0.585 m.
- Acoustic environment:
  - the semianechoic chamber (for EMC measurement), length – 17 m, width – 10 m,
    height – 7.5 m,
  - the reflective surface: concrete,
  - test environmental correction $K_2$ (according to ČSN ISO 3744 [2] – calculation by
    means of test room absorbability),
    $K_{2(1\,m)} = 0.25\,\text{dB} < 2\,\text{dB} (\alpha = 0.35)$ – in compliance with standard ČSN EN ISO 11 201
    [1] – for 1 m distance.
    $K_{2(5\,m)} = 0.68\,\text{dB} < 2\,\text{dB} (\text{sound absorbability mean factor } \alpha = 0.35)$ – in compliance
    with standard ČSN EN ISO 11 201 – for 5 m distance.
    $K_{2(10\,m)} = 1.71\,\text{dB} < 2\,\text{dB} (\alpha = 0.35)$ – in compliance with standard ČSN EN ISO 11 201
    – for 10 m distance.

Figure 1: Equipment under test in test chamber
• Acoustic date:
  - response characteristic: F (fast),
  - weighting network: A,
  - measurement time interval: 30 s,
  - background noise correction $K_1$ – for 1 m, 5 m and 10 m distance (according to ČSN EN ISO 11 201).

2 MEASUREMENT LOCATION

It was defined measurement location according to the customer requirements, microphone height 1.10 m, distance from equipment (centre of equipment) 1 m; 5 m and 10 m.

3 TEST RESULTS

$L'p_A$ - measured sound pressure levels A
$Lp_A$ - emission sound pressure levels A ($Lp_A = L'p_A - K_1$)

The reproducibility standard deviation $\sigma_{R0} \leq 1.5$ dB (ČSN EN ISO 11 201).
The results were acquired in compliance with standard ČSN EN ISO 11 201.
