FOR YOUR OWN SAFETY, PLEASE READ THIS USER MANUAL CAREFULLY BEFORE POWERING OR INSTALLING YOUR ROBIN SuperSuperSpikie!

Save it for future reference.

This device has left our premises in absolutely perfect condition. In order to maintain this condition and to ensure a safe operation, it is absolutely necessary for the user to follow the safety instructions and warning notes written in this manual.

The manufacturer will not accept liability for any resulting damages caused by the non-observance of this manual or any unauthorized modification to the device.

Please consider that damages caused by manual modifications to the device are not subject to warranty.

The Robin SuperSpikie was designed for indoor use and it is intended for professional application only. It is not for household use.

1. Safety instructions

DANGEROUS VOLTAGE CONSTITUTING A RISK OF ELECTRIC SHOCK IS PRESENT WITHIN THIS UNIT!

Make sure that the available voltage is not higher than stated on the rear panel of the fixture. This fixture should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supplied, consult your authorized distributor or local power company.

WARNING! This unit does not contain an ON/OFF switch. Always disconnect power input cable to completely remove power from unit when not in use or before cleaning or servicing the unit.

Do not allow anything to rest on the power cord. Do not locate this fixture where the cord may be damaged by persons walking on it.

Make sure that the power cord is never crimped or damaged by sharp edges. Check the fixture and the power cord from time to time.

Refer servicing to qualified service personnel.

This fixture falls under protection class I. Therefore this fixture has to be connected to a mains socket outlet with a protective earthing connection.

Do not connect this fixture to a dimmer pack.

LED light emission. Risk of eye injury. Do not look into the beam at short distance of the of the product. Do not view the light output with optical instruments or any device that may conncentrate the beam.

The light source contains blue LEDs.

CAUTION! Risk group 2, RG-2

If the fixture has been exposed to drastic temperature fluctuation (e.g. after transportation), do not switch it on immediately. The arising condensation water might damage your device. Leave the device switched off until it has reached room temperature.

This fixture was designed for indoor use only, do not expose this unit to rain or use near water. When choosing the installation spot, please make sure that the fixture is not exposed to extreme heat, moisture or dust.

Air vents and slots in the fixture's head and base are provided for ventilation, to ensure reliable operation of the device and to protect it from overheating.

Do not block the front lens with any object when the fixture is under operation.

The openings should never be covered with cloth or other materials, and never must be blocked. This fixture should not be placed in a built-in installation unless proper ventilation is provided.

Only operate the fixture after having checked that the housing is firmly closed and all screws are tightly fastened.

Always use a secondary safety wire when rigging this fixture.

Make sure that the area below the installation place is blocked when rigging, derigging or servicing the fixture.

The fixture becomes very hot during operation. Allow the fixture to cool approximately 20 minutes prior to manipulate with it.

Operate the fixture only after having familiarized with its functions. Do not permit operation by persons not qualified for operating the fixture. Most damages are the result of unprofessional operation!

Please use the original packaging if the fixture is to be transported.

Please consider that unauthorized modifications on the fixture are forbidden due to safety reasons! If this device will be operated in any way different to the one described in this manual, the product may suffer damages and the guarantee becomes void. Furthermore, any other operation may lead to dangers like short-circuit, burns, electric shock, crash etc.

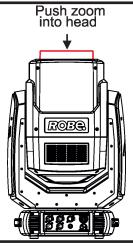

Immunity of the equipment is designed for electromagnetic environments E1, E2, E3 according to the standard EN55103-2 ed.2 Electromagnetic compatibility. Product family standard for audio, video, audiovisual and entertainment lighting control apparatus for professional use. Part 2: Immunity.

The installation company should check levels of possible interferences above the tested levels E1,E2,E3 given by this standard (e.g. transmitters in surrounding area) before installing the equipment. Emission of the equipment complies with the standard EN55032 Electromagnetic compatibility of multimedia equipment – Emission Requirements according to class B.

To avoid damage of the internal optical system of the fixture, never let the sunlight or other fixture lights directly to the front lens, even when the fixture is not working!

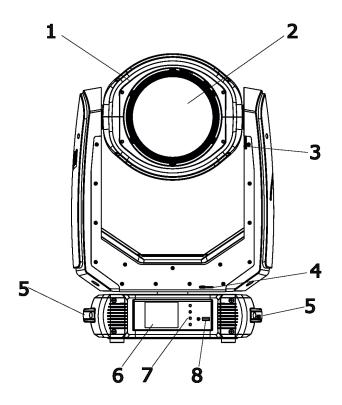

Be carefull when the fixture performs fast pan and (or) tilt movement. There is a danger of injury of your hands (especially fingers).

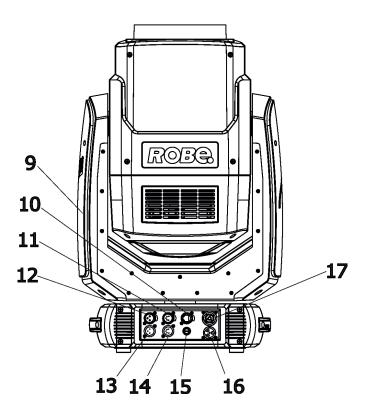

Always push the zoom module into the head before inserting the fixture into the flight case.

Insert the fixture into the flight case with caution!

- **14** 5-pin DMX IN
- 15 Fuse holder 16 - Mains IN
- 17 Mains OUT

3. Installation

Fixtures must be installed by a qualified electrician in accordance with all national and local electrical and construction codes and regulations.

3.1 Connection to the mains

For protection from electric shock, the fixture must be earthed!

The Robin SuperSpikie is equipped with auto-switching power supply that automatically adjusts to any 50-60Hz AC power source from 100-240 Volts.

If you need to install a power plug on the power cable to allow connection to power outlets, install a grounding-type (earthed) plug, following the plug manufacturer's instructions. If you have any doubts about proper installation, consult a qualified electrician.

The cores in the power cable are coloured according to the following table.

| Core (EU) | Core (US) | Connection | Plug Terminal Marking |
|--------------|-----------|------------|-----------------------|
| Brown | Black | Live | L |
| Light blue | White | Neutral | N |
| Yellow/Green | Green | Earth | |

This device falls under class one and must be earthed (grounded).

To apply power, first check that the head pan and tilt locks are released.

Design of the Robin SuperSpikie allows to connect several fixtures to AC mains power in one interconnected daisy chain using power input and throughput connectors. Needed daisy chain cords are stated in the chapter "Technical specifications"

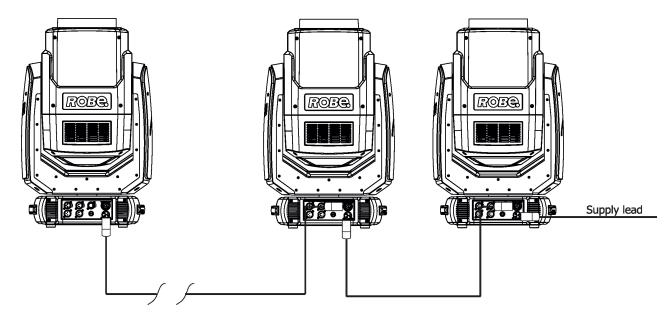

The max. number of connected fixtures depends on the AC mains power voltage and certification:

CE cETLus

10 fixtures at power supply= 230V 6 fixtures at power supply= 230V 5 fixtures at power supply= 208V 5 fixtures at power supply= 120V 3 fixtures at power supply= 120V

Actual numbers of fixtures may differ from values stated above as you have to take into account the length of supply cables, circuit breaker etc. at projecting of the fixtures installation Do not overload the supply line and the connecting leads.

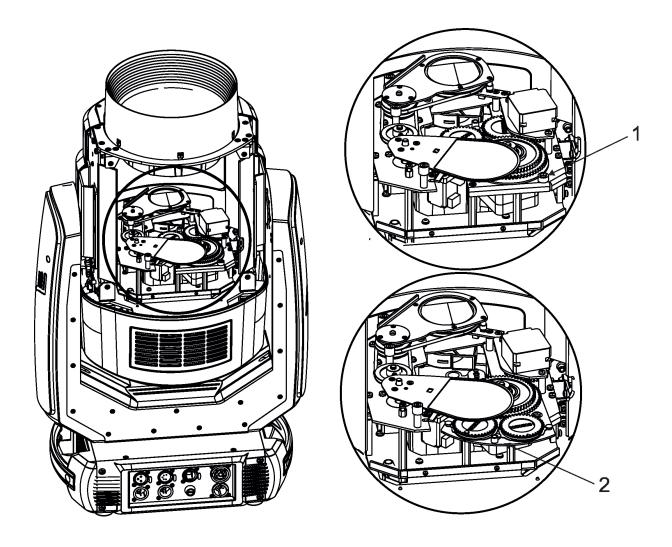

Wiring and connection work must be carried out by qualified staff!

3.2 Replacing gobos

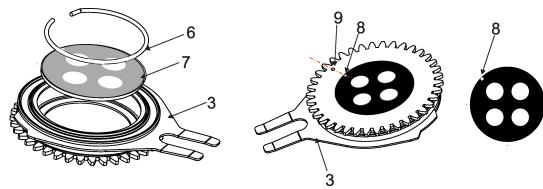

Unplug the fixture from mains before replacing gobos!

- 1. Disconnect the fixture from mains and allow it to cool for 15 minutes.
- 2. Remove the plastic cover of the head by loosening the 4 screws on the cover.
- 3. Unscrew the stop (1) in order to get access to the gobos placed in the gobo module (2).

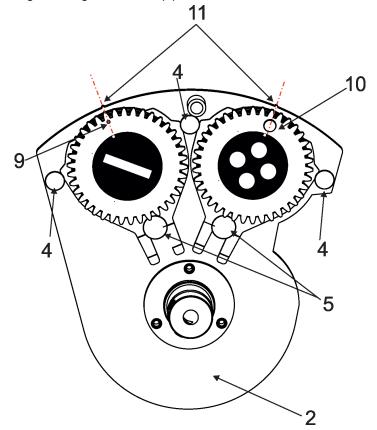

- 4. Gently pull up the gobo holder (3) from the gobo module.
- 5. Remove the spring lock (6) with an appropriate tool (e.g. small-bladed screwdriver) and remove it. Do not touch the surface of the pattern of the glass gobo with bare fingers.
- 5. Remove the original gobo (7) and insert the new one (glossy side towards the light source, black matt side towards the front lens).

The Robe gobo has a small position point (8) at its edge which has to exactly aim at the position point (9) or the magnet (10) on the gobo holder (3). Insert the spring lock (6) to secure correct gobo position in the gobo holder.

- 6. Turn the remaining gobo holder in the gobo module to the position that its position point (9) or magnet (10) exactly aims at the small toothlike projection (11) on the edge of the gobo module (2).
- 7. Insert he gobo holder back under the distance slots (4) and the stop (5) into the gobo module in this way, that its position point (9) has to aim at the small toothlike projection (11) on the edge of the gobo module (2). Do not turn the remaining gobo during inserting the gobo holder back.
- 8. Check that both gobo holders have position point (9) or magnet (10) exactly towards the small toothlike projections (11) on the edge of the gobo module (2).

9. Screw the stop (1) back to the head. Screw the head cover back.

3.3 Rigging the fixture

A structure intended for installation of the fixture (s) must safely hold weight of the fixture(s) placed on it. The structure has to be certificated to the purpose.

The fixture (fixtures) must be installed in accordance with national and local electrical and construction codes and regulations.

For overhead installation, the fixture must be always secured with a safety wire that can bear at least 10 times the weight of the fixture.

When rigging, derigging or servicing the fixture staying in the area below the installation place, on bridges, under high working places and other endangered areas is forbidden.

The operator has to make sure that safety-relating and machine-technical installations are approved by a skilled person once a year.

The fixture should be installed outside areas where persons may walk by or be seated.

IMPORTANT! OVERHEAD RIGGING REQUIRES EXTENSIVE EXPERIENCE, including (but not limited to) calculating working load limits, installation material being used, and periodic safety inspection of all installation materials and the fixture. If you lack these qualifications, do not attempt the installation yourself, but instead use a professional structural rigger. Improper installation can result in bodily injury or damage to property. The fixture has to be installed out of the reach of people.

The fixture must never be fixed swinging freely in the room.

Caution: Fixture may cause severe injuries when crashing down! If you have doubts concerning the safety of a possible installation, do not install the moving head!

Before rigging make sure that the installation area can hold a minimum point load of 10 times the fixture's weight.

When installing the device, make sure there is no highly inflammable material (decoration articles, etc.) in a distance of min. 0.4 m.

Min. distance to lighted object: 2 m

CAUTION!

Use an appropriate clamp to rig the fixture on the truss.

Make sure that the device is fixed properly! Ensure that the structure (truss) to which you are attaching the fixture is secure.

The fixture can be placed directly on the stage floor or rigged on a truss without altering its operation characteristics.

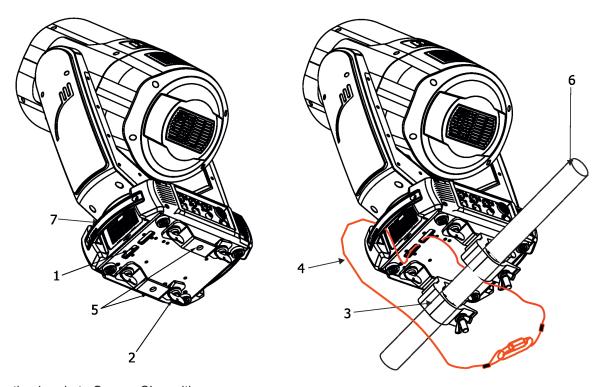

Due to very fast pan/tilt movement of the fixture, the fixture has to be always anchored to the ground (base) otherwise there is a danger of knocking the fixture over.

For securing the fixture to the truss install a safety wire that can hold at least 10 times the weight of the fixture. Use only the safety wire with a snap hook with screw lock gate. Fasten the snap hook in the attachment point and the safety wire around the truss as shown on the picture below.

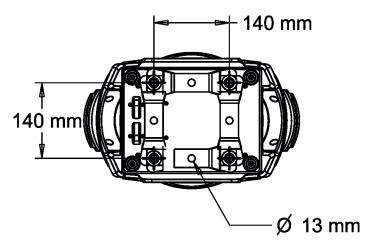

Truss installation

- 1. Bolt the clamps(3) to the omega holder (5) with M12 bolt and lock nut through the hole in the omega holder.
- **2.** Fasten the omega holders to the bottom of the base by inserting both quick-lock fasteners (2) into the holes of the base and tighten fully clockwise.
- 3. Clamp the fixture on a truss (6) and tighten the rigging clamps.
- **4.** Pull the safety wire (4) through the attachment point (1) and through the handle (7) and around the truss (6) and lock the snap hook with screw lock gate.

Use only a safety wire with a snap hook with screw lock gate.

Mounting brackets Omega CL positions:

When installing fixtures side-by-side, avoid illuminating one fixture with another!

3.4 DMX-512 connection

The fixture is equipped with 5-pin XLR sockets for DMX input and output. Only use a shielded twisted-pair cable designed for RS-485 and 5-pin XLR plugs and connectors in order to connect the controller with the fixture or one fixture with another.

DMX output XLR socket:

DMX input XLR plug:

- 1 Shield
- 2 Signal (-)
- 3 Signal (+)
- 4 Used for wireless DMX
- 5 Used for wireless DMX

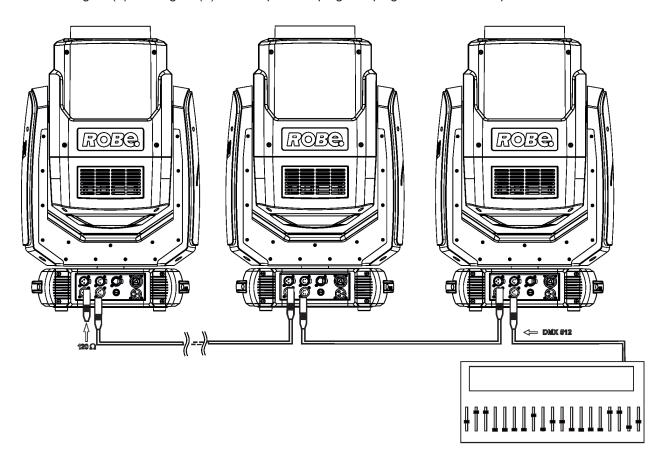

- 1 Shield
- 2 Signal (-)
- 3 Signal (+)
- 4 Used for wireless DMX
- 5 Used for wireless DMX

If you are using the standard DMX controllers, you can connect the DMX output of the controller directly with the DMX input of the first fixture in the DMX chain. If you wish to connect DMX controllers with other XLR outputs, you need to use adapter cables.

Building a serial DMX-chain:

Connect the DMX-output of the first fixture in the DMX chain with the DMX input of the next fixture. Always connect one output with the input of the next fixture until all fixtures are connected. Up to 32 fixtures can be interconnected.

Caution: At the last fixture, the DMX cable has to be terminated with a terminator. Solder a 120 Ω resistor between Signal (–) and Signal (+) into a 5-pin XLR plug and plug it in the DMX output of the last fixture.

3.5 Ethernet connection

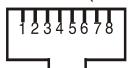

The fixtures on a data link are connected to the Ethernet with ArtNet (or MANet, MANet2, sACN) communication protocol. The control software running on your light console has to support some of the protocols. Art-Net communication protocol is a 10 Base T Ethernet protocol based on the TCP/IP.Its purpose is to allow

transfer of large amounts of DMX 512 data over a wide area using standard network technology.

IP address is the Internet protocol address. The IP uniquely identifies any node (fixture) on a network. **The Universe** is a single DMX 512 frame of 512 channels.

The Robin SuperSpikie is equipped with 8-pin RJ- 45 socket for Ethernet input. Use a network cable category 5 (with four "twisted" wire pairs) and standard RJ-45 plugs in order to connect the fixture to the network.

RJ-45 socket (front view):

1- TD+ 2- TD-

3- RX+ 4- Not connected 5- Not connected 6- RX-

7- Not connected 8- Not connected

RJ-45 plug (front view):

Patch cables that connect fixtures to the hubs or LAN sockets are wired 1:1,that is,pins with the same numbers are connected together:

1-1

2-2

4-4

5-5

6-6

7-7 8-8

If only the fixture and the computer are to be interconnected, no hubs or other active components are needed. A cross-cable has to be used:

7-5

1-3

2-6

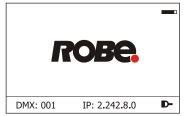

3-1

4-8

5-7

6-2

If the fixture is connected with active Ethernet socket (e.g. switch) the network icon per will appear at the bottom right corner of the screen:

Ethernet operation

Connect the Ethernet inputs of all fixtures with the Ethernet network.

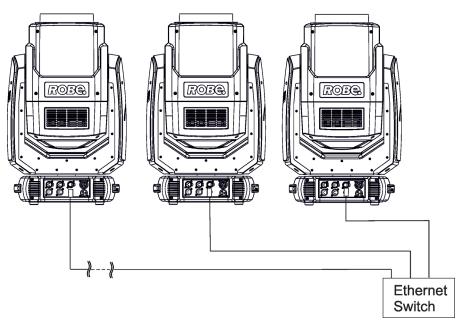

Option "Artnet (gMal or gMA2 or sACN)" has to be selected from "Ethernet Mode" menu on the fixture. Set IP address (002.xxx.xxx.xxx / 010.xxx.xxx.xxx) and the Universe.

(DMX address=161) IP addres=002.168.002.004

Universe=1

(DMX address=33) IP addres=002.168.002.003 Universe=1

(DMX address=1) IP addres=002.168.002.002 Universe=1

An advised PC setting: IP address: 002.xxx.xxx.xxx / 010.xxx.xxx.xxx (Different from fixture IP addresses) NET mask: 255.0.0.0

12

Ethernet / DMX operation

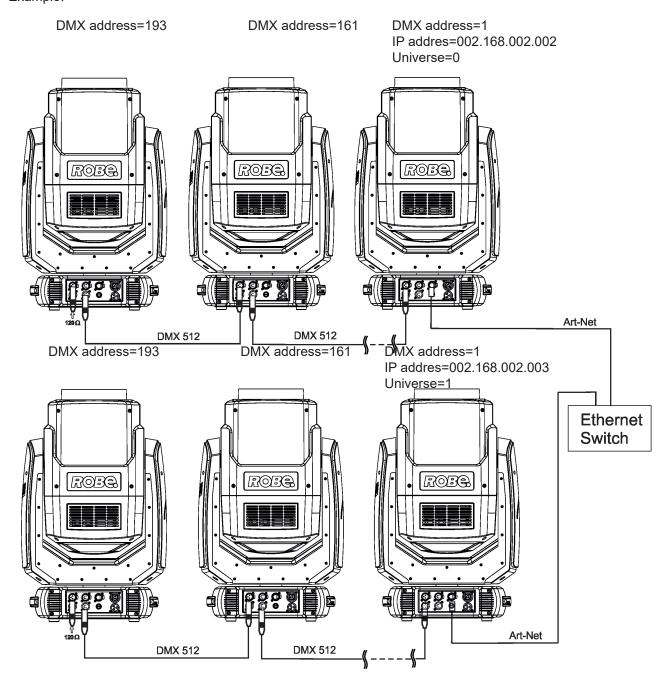

Option "Artnet" (gMal or gMA2 or sACN) has to be selected from "Ethernet Mode" menu at first fixture.

Option "Ethernet To DMX" has to be selected from the menu "Ethernet Mode" at the first fixture (connected to the Ethernet) in the fixture chain, next fixtures have standard DMX setting.

Connect the Ethernet input of the first fixture in the data chain with the network. Connect DMX output of this fixture with DMX input of the next fixture until all fixtures are connected to the DMX chain.

Caution: At the last fixture, the DMX chain has to be terminated with a terminator. Solder a 120 Ω resistor between Signal (–) and Signal (+) into a XLR-plug and connect it in the DMX-output of the last fixture.

Example:

3.6 Wireless DMX operation

The wireless version of the Robin SuperSpikie is equipped with the Lumen Radio CRMX module and antenna for receiving DMX signal. CRMX module operates on the 2.4 GHz band.

The item "Wireless "from the menu "DMX Input" allows you to activate receiving of wireless DMX (Personality--> DMX Input --> Wireless.). First two options from the "DMX Input" menu are stated in DMX chart as well (channel Power/Special functions, range of 10-19 DMX). If DMX input option is changed by DMX command, the change is <u>permanently written</u> into fixture's memory.

DMX range of 10-19 switching fixture to the wired/wireless operation is active <u>only</u> during first 10 seconds after switching the fixture on.

After switching the fixture on, the fixture checks both modes of receiving DMX in the following order:

- 1. For the first five seconds, the fixture receives DMX signal from the wired input. If the Power/Special functions channel is set at some DMX input option, the fixture will receive DMX value according to this option. If DMX input option is set to the wired input, this option is saved and checking procedure is finished. If DMX input option is not set, the fixture continues next 5 seconds in scanning wireless DMX signal-see point 2.
- 2. For the next 5 seconds the fixture receives wireless DMX signal and again detects if the Power/Special functions channel is set at some DMX input option, if not, the fixture will take option which is set in the fixture menu "DMX Input".

To link the fixture with DMX transmitter.

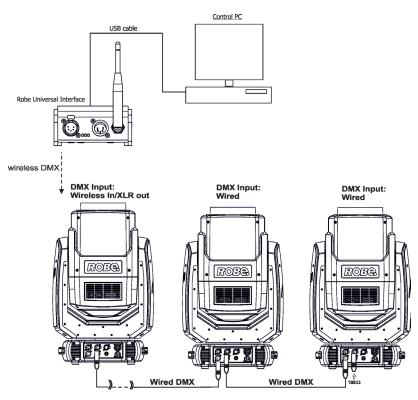

The fixture can be only linked with the transmitter by running the link procedure at DMX transmitter. After linking, the level of DMX signal (0-100 %) is displayed in the menu item "Wireless State" (Information -->Wireless State).

To unlink the fixture from DMX transmitter.

The fixture can be unlinked from receiver via the menu item "Unlink Wireless Adapter" (Information--> Wireless State --> Unlink Wireless Adapter.).

Note: If the option "Wireless In/XLR Out" is selected (Personality--> DMX Input --> Wireless In/XLR Out), the fixture receives wireless DMX and sends the signal to its wired DMX output. The fixture behaves as " Wireless/ Wired" adapter.

Example of connection:

4. Remotely controllable functions

Virtual Colour wheel

The virtual colour contains 67 preset colours, rainbow effect in both directions with variable speed.

CTC (colour temperature correction)

The CTC channel allows to change colour temperature of white in range of 2700K-8000K.

Colour Mix control

The Colour Mix control channel defines relation between colour channels (R,G,B,W) and virtual colour wheel:

| DMX value | Function |
|-----------|--------------------------------------------------------------------|
| 0-9 | Virtual colour wheel has priority |
| 10-19 | Maximum mode (highest values have priority) |
| 20-29 | Minimum mode (lowest values have priority) |
| 30-39 | Multiply mode (multiply Virtual colour wheel and Colour channels) |
| 40-49 | Addition mode (Virtual colour wheel + Colour channels) - default |
| 50-59 | Subtraction mode (Virtual colour wheel – Colour channels) |
| 60-69 | Inverted Subtraction mode (Virtual colour wheel – Colour channels) |
| 70-128 | Reserved |
| 129 | Virtual colour wheel has priority |
| 130-254 | Cross fade between Virtual colour wheel and colour channels |
| 255 | Colour channels have priority |

Prism

The 3-facet prism rotates in both directions at different speeds.

Flower Effect

The Flower effect rotates in both directions with variable speed. 10 Flower effect macros are created.

Frost filter

The separate frost filter allows you to widen max. beam angle up to 42°.

Rotating gobos

Two glass gobos rotates in both directions, both gobos are indexable and replaceable due to "SLOT&LOCK" system.

Zoom

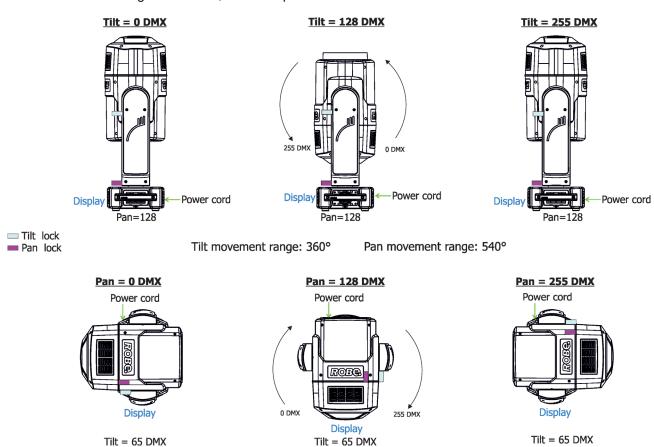

The motorized zoom module allows beam range of 4° -33° (Flower Effect Off) / 3.5°-31° (Flower Effect Off) or 5°-42° (with Frost filter).

Dimmer/Shutter unit

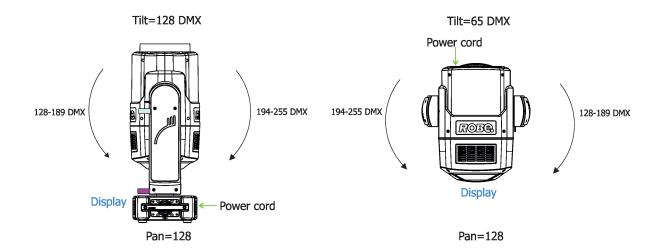

Smooth 0 - 100 % dimming is provided by the electronic control unit of the light source. This unit is also used for strobe effects with variable speed.

Pan/Tilt

Pan/tilt movement range: 540°/360°, continual pan/tilt rotation.

Direction of continual rotation

Pan control/Tilt control channels

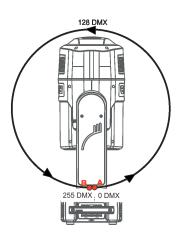

<u>Pan control (Tilt control) channel = 0 DMX (default value)</u> - if the pan (tilt) receives a value 255 DMX from a DMX controller and next received DMX value for the pan (tilt) will be 0 DMX, the pan (tilt) will move to the point 0 DMX around entire track 255-0 DMX.

<u>Pan control (Tilt control) channel = 1 DMX</u> - if the pan (tilt) receives a value 255 DMX from a DMX controller and next received DMX value for the pan (tilt) will be 0 DMX, the pan (tilt) will move to the point 0 DMX directly without changing its direction of movement.

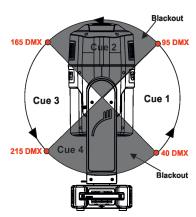

Tilt control = 0 DMX (default)

255 DMX . 0 DMX

Tilt control = 1 DMX

Tilt control = 1 DMX Example of blackout in certain positions of head

peatedly.

The head moves from the point A The head moves from the point A movement to the point B.

DMX controller sends tilt DMX DMX controller sends tilt DMX values 0,1,2,....254,255,0,1... re- values 0,1,2,....254,255,0,1... repeatedly.

(0 DMX) to the point B (255 DMX) (0 DMX) to the point B (255 DMX) and from the point B returns to the and continues in movement to the point A (0 DMX and continues in point A (0 DMX) in the same direction (without changing direction of its movement).

The four cues are repeated in the order: Cue 1, Cue 2, Cue 3, Cue 4, Cue 1.....

Tilt DMX values are changing in the cues as follows:

Cue 1: 40, 41...94,95.

Cue 2: 96, 97....164,165.

Cue 3: 166,167....214,215.

Cue 4: 216,217....38,39

The dimmer is closed in Cues 2 and 4.

6. Control menu

The Robin SuperSpike Light is equipped with the QVGA Robe touch screen with battery backup which allows to set the fixture's behaviour according to your needs, obtain information on its operation, test its various parts and lastly program it, if it has to be used in a stand-alone mode.

The fixture's menu can be controlled either by the control buttons or directly by touching the icon.

Control buttons on the front panel:

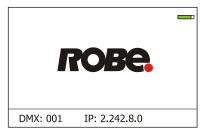

[ESCAPE] button used to leave the menu without saving changes.

[NEXT], [PREV] buttons for moving between menu items and symbols, adjusting values. [ENTER/Display On] button used to enter the selected menu (menu item) and to confirm adjusted value. If the fixture is disconnected from mains, the button switches the touch screen on.

Icons used in the touch screen menu:

- [back arrow] used to move back to the previous screen (menu).
- [up arrow] used to move up on the previous page.
- [down arrow] used to move down on the next page.
- [confirm] used to save adjusted values, to leave menu or to perform desired action.
- [cancel] used to leave menu item without saving changes.
- [confirm+copy] used to save adjusted values and copy them to the next prog. step.
- [warning icon] used to indicate some error which has occurred in the fixture.
- [Ethernet] used to indicate Ethernet connected.
- [display turn] used to turn the display by 180°.
- [slider control] used to recall slider system for setting desired value.
- . [keyboard control] used to recall keyboard system for setting desired value.
- Rile [air filters cleaning] used to signal that cleaning period of the air filters elapsed.

After switching the fixture on, the touch screen shows the screen with the ROBE logo:

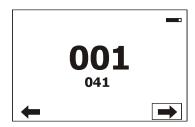

<u>Note:</u> The green icon at the top right corner of the screen indicates the level of the display battery charging. If the whole icon is green, the battery is fully charged while the red icon indicates exhausted battery. The battery charges during fixture operation, its charging lasts cca 6 hours.

We recommend that the fixture should be in operation at least 7 hours per week to keep the battery fully charged. If you switch the fixture on and this screen will not appear till 1 minute, switch the fixture off and on again. If the screen lights, the battery is exhausted. In case the screen still does not light, the battery is faulty.

This is also indicated by an error message "Faulty battery" and if such an error message appears the battery should be replaced immediately. The lifetime of the battery is highly dependent on ambient temperature (and consequently on base temperature). If the maximum ambient temperatures (as recorded and displayed in menu: Information -> Fixture Temperatures -> Ambient Temperature -> Maximum NonRes.) are kept within the specified limits, the battery should last for at least two years. Shell the ambient temperatures exceed the specified maximum temperature, the lifetime of the batteries could be considerably shortened even up to just one year or less and also result in physical damage (battery leakage) or unreliable fixture functions.

Damage caused by batteries failed due to exceeded maximum ambient temperature cannot be claimed under warranty terms.

Touch any part of the screen or press the [ENTER/Display On] button to display the initial screen with the current stored DMX address:

Touch the green arrow at the bottom right corner of the screen or press the [ENTER/Display On] button to enter the "Address" menu.

Each item (such as a Tab, menu item, text box, icon) may be selected from a screen by simply touching the item in the list or by pressing the [NEXT] or [PREV] buttons to scroll through items. With each press, the next item is highlighted. Press [ENTER/Display On] to select the highlighted item.

Before first fixture operation, set current date and time in the menu "Date &Time Setings" (menu path: Personality--> Date &Time Setings).

6.1 Tab " Address"

DMX Address - Select the menu to set the DMX start address.

Ethernet Settings - The menu allows all needed settings for the Ethernet operation

Ethernet Mode

<u>Disable</u> - The option disables Ethernet operation.

<u>Artnet</u> - Fixture receives Artnet protocol

gMAI - Fixture receives MANet I protocol

gMA2 - Fixture receives MANet 2 protocol

sACN - Fixture receives sACN protocol

Ethernet To DMX - Fixture receives protocol from the Ethernet input and sends DMX

data to its DMX output (fixture works as an "Ethernet/DMX converter", next fixture can be connected to its DMX output and you can build a standard DMX chain by connecting another fixtures.

Only one fixture has to be connected to the Ethernet.

<u>IP Address/Net Mask</u> - Select this menu to set IP address. IP address is the Internet protocol address. The IP uniquely identifies any node (fixture) on a network.

There cannot be 2 fixtures with the same IP address on the network!

<u>Default IP Address</u> -Preset IP address, you can set up only first byte of IP address (2 or 10) e.g. **002**.019.052.086.

<u>Custom IP Address</u> - The option enables to set up all bytes of IP address.

Net Mask - The option enables to set up all bytes of Net Mask.

<u>ArtNet Universe</u> - Use this item to set a Universe (0-255). The Universe is a single DMX 512 frame of 512 channels.

MANet Settings - Use this menu to set parameters for MANet operation.

MANet Universe I/II - The value of this item can be set in range 1-256. **MANet Session ID** - The value of this item can be set in range 1-32.

sACN Settings - Use this menu to set parameters for sACN operation.

sACN Universe - The value of this item can be set in range 1-32000.

Klingnet Settings - Use this menu to enable or disable Klingnet protocol.

6.2 Tab "Information"

Fixture Times - The menu provides readouts of fixture operation hours and air filters using hours.

<u>Power On Time Hours</u> - Select this menu to read the number of fixture operation hours.

<u>Total Hours</u> - The item shows the total number of the operation hours since the Robin SuperSpike has been fabricated.

Resetable Hours - The item shows the number of the operation hours that the Robin SuperSpike has been powered on since the counter was last reset.

In order to reset this counter to 0, touch the text box next to the item "Resetable Hours:"

<u>Air Filters</u> - Regular cleaning of the air filters is very important for the fixture's life and performance. Bild-up of dust, dirt and fog fluid residues reduces the fixture's light output and cooling ability.

The two items of this menu help you to keep cleaning period of the air filters.

Alert period - Cleaning schedule for the fixture depends on the operating environment. It is therefore impossible to specify accurate cleaning interval. This item allows you to change the cleaning interval of the air filters. This "alert" value is 300 hours and it is set as default. Inspect the fixture within its 300 hours of operation to see whether cleaning is necessary. If cleaning is required, clean all air filters and change the value in this menu on acceptable level. Min. level of alert period is 10 hours, max. is 300 hours.

<u>Elapsed Time</u> - The item allows you to read the time which remains to cleaning air filters. The time period is set in the menu mentioned above.

Expired time period is signalled by a negative mark (-) at the time value and a warning icon on the display.

Clean the filters and reset this menu item (by touching the text box next to the item "Elapsed Time").

<u>Fixture Temperatures</u> - The menu is used to view temperatures of the fixture's inside.

LEDs temperatures - The menu shows temperature on the LEDs PCB .

Cur. - A current temperature of the LEDs PCB.

<u>Max.</u> - A maximum temperature of the LEDs PCB since the fixture has been fabricated.

<u>Max. Res.</u> - A maximum temperature of the LEDs PCB since the counter was last reset.

In order to reset some counter to 0, touch desired text box under item "Max.Res."

Base Temperature - The menu shows temperature in the fixture base (on the display PCB).

Current - A current temperature in the fixture base.

<u>Maximum NonRes.</u> - A maximum temperature in the fixture base since the fixture has been fabricated.

<u>Maximum Res.</u> - A maximum temperature in the fixture base since the counter was last reset.

In order to reset this counter to 0, touch the text box next to the item "Maximum Res."

DMX Values - The menu is used to read DMX values of each channel received by the fixture.

Wireless State - The menu serves for reading of the wireless operation status.

Unlink Wireless Adapter - The item serves for unlinking the fixture from a DMX transmitter.

If the wireless module is not installed in the fixture, message" Wireless Module Not Installed" will appear.

Power Channel State - The menu item shows state of the Power/Special functions switches.

Software Version - Select this item to read the software version of control processors:

Display System - a display processor on the display board in the fixture base

Module M - a pan/Tilt control processors

Module G - a gobo control processor

Module P - a prism/frost control processor

Module O - a zoom control processor

Module L - a LEDs control processor

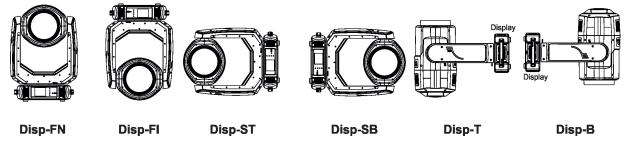

Product IDs - The menu is used to read the MAC Address ,RDM UID and RDM Label.

View Logs - Use this menu to read fixture's data which have been recorded during fixture operation. This colected data allows easier troubleshooting.

Fixture Errors - Use this menu to read fixture errors which have occured during fixture operation.

Fixture States - In the menu are recorded the following actions: Power On, Power Off.

Fixture Position - In the menu are recorded installation positions of the fixture:

Fixture Temperatures - Recorded temperatures (LEDs Temperature, Base Temperature) which have exceeded defined levels.

Note: The log buffer can contain 8000 records max. If the buffer is full, old data will be overwritten.

6.3 Tab "Personality"

User mode - The Robin SuperSpikie allows you to recall two user settings. After switching the fixture on for the first time, the User A settings is active. Now all changes made in the "Personality" tab, "Addressing" tab and the items "Music Trigger" and "Preset Playback" from the "Stand-alone" tab are saved to the User A settings. If you now select the User B settings, from this moment the changes made in these menus will be saved to the User B settings. After switching the fixture off and on, the User B setting is active.

User A Settings - the function recalls the user A settings.

User B Settings - the function recalls the user B settings.

DMX Input- Use the menu to select mode of receiving DMX signal.

Wired - DMX signal is received by means of the standard DMX cable.

Wireless - DMX signal is received by means of the inbuilt wireless module.

Wireless In/XLR Out- the fixture receives wireless DMX and sends the signal to its wired DMX output.

The fixture behaves as "Wireless/Wired" adapter.

The options "Wired" and "Wireless" are also stated in DMX chart (channel Power/Special functions). Note. If the wireless module is not installed in the fixture, the following message will appear:

"DMX Input Set to Wired"

"Wireless Module Missing"

If the fixture is not connected to mains, the message "Not Available In Off line Mode" will appear after entering the menu DMX Input. To enter this menu, the fixture has to be connected to mains.

Pan/Tilt Settings - Use the menu set behaviour of both pan and tilt movements.

Pan Reverse - The item allows to invert pan movement.

<u>Tilt Reverse</u> - The item allows to invert tilt movement.

<u>Pan/Tilt Feedback</u> - The item allows to return the mowing head to the required pan/tilt position after changing the position by an external force if this option is set on.

Note. Be careful, the Pan/Tilt Feedback should be permanent On, the option Off is not suitable for standard operation and the head of the fixture can be damaged!

Pan/Tilt mode - Use this menu to set the mode of the pan/tilt movement.

<u>Time mode</u> – The pan and tilt will move with different speeds and they will come at the same time to the end point of their tracks (pan and tilt use their optimal speeds). Time of the pan/tilt movement (25.5 sec. max.) is set by the channel "Pan/Tilt speed, Pan/Tilt time"

Speed Mode - Both Pan and tilt will move with the same speed as adjusted at the channel "Pan/Tilt speed, Pan/Tilt time".

<u>Microphone Sensitivity</u> - Enter the menu if you want to adjust the microphone sensitivity from 1 (max.) to 20 (min.).

<u>Blackout Settings</u> - Use the menu if you need to close the light output under certain conditions which are described below

<u>Blackout DMC</u> - Blackout during movement correction. Set this option On if you wish to close light output during the time when the head goes to its correct position, which has been changed by an external force.

Active Blackouts - Use this menu if you wish to close the light output during effect changes.

Pan/Tilt Moving - The menu item enables to close light output while pan or tilt position of the moving head is changing.

<u>Colour Mixing Mode</u> - This item allows switching into RGBW or CMY mode. In the CMY mode, the white(8bit)/ white (16) bit channels are not active.

<u>White Point 8000K</u> - If the function is on, the CTC channel allows to set desired white in range of 8000K-2700K (0 DMX=8000K, 255 DMX=2700K). Necessary condition is , that RGBW channels have to be full or set at the same DMX values, e.g. 150.

If this function is off, the range of whites is not uniform and may be different for each fixture.

Tungsten Effect Sim. - This function simulates behaviour of a halogen lamp during dimming at calibrated whites 2700K, 3200K. You can select from various lamp wattage simulation: 750W, 1000W, 1200W, 2000W, 2500W.

<u>Init Effect Positions</u> - Use the menu to set all effects to the desired positions at which they will stay after switching the fixture on without DMX signal connected.

<u>Screen Settings</u> - Use this menu to change the touch screen settings.

Display Intensity - The item allows to control the intensity of the screen (1-min., 10-max.).

<u>Screen saver Delay</u> - The item allows you to keep the screen on or to turn it off automatically after 1-10 minutes after last touch (or pressing any button on the control panel).

<u>Touchscreen Lock</u> - The item allows you to lock the screen after last touch (or pressing any button on the control panel). The time delay can be set in range of 1-10 minutes. To unlock the screen, press the [ENTER/Display On] button.

<u>Recalibrate Touchscreen</u> - The item starts calibration of the touchscreen. Follow the instructions on the screen.

<u>Display Orientation</u> - The menu allows to change display orientation.

Normal - Standard display orientation if the fixture is placed horizontally (e.g. on the ground).

Inverted - This function rotates menu 180 degrees from current orientation.

<u>Auto</u> - The option activates a gravitation sensor for automatic screen orientation.

Note: **Auto** option is set as default. You change the display orientation by touching the icon on the display, an the option set in the "Display Orientation" menu is temporarily overriden.

Temperature unit - Use the menu item to change temperature unit from °C to °F.

<u>Fan Mode</u> - Use the menu to set the fixture fans to max. fan power mode ("**High**") or to the auto-control mode ("**Auto**"). The third mode ("**Quiet**") allows to set desired noise of the fans and the adjusted noise level is kept during fixture operation. The "**Fan Noise Level**" menu serves for adjusting fans power from min. to max. To switch the fixture to the "Quiet" mode can be also realized by DMX value from range of 241-255 on the

"power/Special functions" channel.

Note: the light output at min. level of the fan noise is reduced.

Dimmer Curve - You can select desired dimmer curve: Linear or Square Law.

LEDs Output Frequency - The function allows you to set the PWM (Pulse Width Modulation) output frequency of LEDs to Standard (300Hz) or High (600Hz).

LEDs Frequency Adjust - The function allows you to change the selected PWM output frequency of LEDs in 6 levels up and down around the selected frequency in the menu "LEDs Output Frequency".

- -1...-6 Frequence levels 1 6 under selected frequency.
- 00 Selected frequency (Standard or High)
- 1...6 Frequence levels 1 6 above selected frequency.

<u>Date & Time Settings</u> - Use this menu to set current date and time for the fixture log system (menu "View Logs"). Set this menu item before first fixture operation.

<u>Default Settings</u> - The menu item allows to set all fixture parameters to the default (factory) values.

6.4 Tab "Manual Control"

Reset Functions - The menu allows to reset the fixture either per function modules or all modules together.

Total System Reset - The item resets all function modules.

Pan/Tilt Reset - The item resets the pan and tilt movement.

Zoom Reset - The item resets the zoom module.

Flower Ef/Prism Reset - The item resets the Flower effect and rotating prism.

Gobos Reset - The item resets rotating gobos

Manual Effect control - Use the menu to control all fixture channels by means of the control panel.

6.5 Tab "Stand-alone"

<u>Test Sequences</u> -Use the menu to run a test/demo sequences without an external controller, which will show you some possibilities of using the Robin SuperSpike.

<u>Dynamic Mode</u> - This mode uses all Robin SuperSpike functions including pan/tilt movement and therefore is good for a complete introduction of the fixture.

<u>Static Mode</u> - This mode is suitable for projections on the wall, ceiling or ground without any pan/tilt movement. Adjust the pan and tilt to desired positions and start test sequences by touching the green ▶ icon.

<u>Music Trigger</u> - Use the item to activate the sound control of the running program via the built-in microphone. <u>Preset Playback</u> - This menu allows you to select the program which will be played in a loop after switching the fixture on (the option is commonly used in a stand-alone operation without an external controller).

None - The option disables "Presetting playback" function.

Test - The option starts the test sequences.

Prog. 1 - The option starts user program No. 1.

Prog. 2 - The option starts user program No. 2.

Prog. 3 - The option starts user program No. 3.

Play program - Use the menu to run desired program in a loop.

Play Program 1 - The option starts user program No.1.

Play Program 2 - The option starts user program No. 2.

<u>Play Program 3</u> - The option starts user program No. 3.

Edit Program - Use the menu to create or to edit desired program. The Robin SuperSpike offers 3 free programs, each up to 100 steps.

Edit Program 1 - The option allows to edit user program No.1.

Edit Program 2 - The option allows to edit user program No.2.

Edit Program 3 - The option allows to edit user program No.3

To edit program:

- 1. Touch the item which you want to edit ("Edit Program 1" "Edit Program 3").
- 2. Touch the item "Edit Program Steps".
- 3. Touch the item "Step 1".
- 4 From the list of effects touch desired effect and set its value. Browse throw the list by touching the [up arrow] and [down arrow] and set all desired effects.

An item "Step Time" (value of 0-25.5 sec.) is the time during which effects last in the current step

- 5. Save adjusted effects to the current step by touching the [confirm] or save and copy them to the following step by touching the [confirm+copy]. By touching the text box "Preview" next to the current program step you can view created scene.
- 6. Repeat the steps 4 and 5 for next program steps.
- 7. After editing desired program steps, adjust the length of the program by touching the text boxes "Start Step" and "End Step".

Meaning of the icons used in the "Edit Program" menu:

- saves values to the current step and copy them to the following prog. step

- leaves menu without saving values

6.6 Tab "Service"

Adjust DMX Values - The menu allows you to set all effects to desired positions before fine calibration of the effects.

Calibrations - This menu enables fine calibration of fixture effects and download default calibration values.

Calibrate Effects - The menu allows the fine adjustment of effects.

Pan- a pan position fine adjustment

Tilt - a tilt position fine adjustment

Rot. Gobo Wheel - a fine movement of module of rotating gobos

R. Gobo Index 1 - a fine rotation of the rotating gobo 1

R. Gobo Index 2 - a fine rotation of the rotating gobo 2

Rod Rotation - a fine rotation of the rod

Prism 1 - a fine movement of the prism module

Prism 2 - a fine movement of the prism module

Prism Rot. - a fine rotation of the prism

F. Frost 1 - a fine movement of the small frost above rod

F. Frost 2 - a fine movement of the small frost above rod

Frost 1 - a fine movement of the frost module

Frost 2 - a fine movement of the frost module

Zoom - a fine movement of the zoom system

Calibration of the effects via the control board

- 1. Disconnect DMX controller from the fixture and enter the "Calibrate Effects" menu.
- 2. Use the [up arrow] and [down arrow] to find "Pan" and touch it to enter the fine effect adjustment screen.
- 3. Set desired value and save it by touching the [confirm].
- 4. Repeat steps 2 and 3 for next item
- 5. After calibrating all effects, touch the [confirm] to save all adjusted values and reset the fixture.

Calibrate Colours - The menu serves for adjusting of LEDs saturation to achieve uniform white colours

Red - a red LEDs saturation fine adjustment

Green - a green LEDs saturation fine adjusment

Blue - a blue LEDs saturation fine adjustment

White - a white LEDs saturation fine adjustmentt

Calibration of white colours via the control board

- 1. Disconnect DMX controller from the fixture, open shutter and dimmer and set the CTC channel to DMX=64 (white 5600K), RGBW channels to 255 DMX and Zoom channel to 128 DMX.
- 2. Set the following items in the menu Personality:

White Point 8000K =On

Colour Mixing Mode=RGBW

- 3. Aim the light beam on the lux meter (e.g. Minolta CL-70F- Chroma meter) which is placed at min. distance of 3 m from the fixture.
- 4. Enter the menu Calibrate Colours.
- 5. By means of the Red, green, Blue and White items adjust the 5600K colour temperature as exactly as possible ($\Delta u'v' = 0$).
- 6. After adjusting 5600K colour temperature, touch the [confirm] to save all adjusted values and reset the fixture.

Calibration protocol:

| Calibrated Effect | <u>Channel</u> |
|-------------------|----------------|
| Pan | channel 32 |
| Tilt | channel 33 |
| Rot. Gobo Wheel | channel 34 |
| R. Gobo Index 1 | channel 35 |
| R. Gobo Index 2 | channel 36 |
| Rod Rotation | channel 37 |
| Prism 1 | channel 38 |
| Prism 2 | channel 39 |
| Prism Rot. | channel 40 |
| F. Frost 1 | channel 41 |
| F. Frost 2 | channel 42 |
| Frost 1 | channel 43 |
| Frost 2 | channel 44 |
| Zoom | channel 45 |

Load Default Calibrations - The item loads default (factory) calibration values.

<u>Update software</u> - The menu item allows you to update software in the fixture.

The following items are required in order to update software:

- PC running Windows or Linux or macOS
- DSU file
- Flash cable RS232/DMX, P/N13050624 (if you want to use a serial port of PC)
- Robe Universal Interface or Robe Universal interface WTX (if you want to use an USB port of PC)

After the software updating the fixture will be set to default (factory) values.

To update software in the fixture:

1. DSU file is available from Robe web site at WWW.robe.cz.

File with extension zip is intended for Windows (used and tested from XP to W10 on 32/64bit systems).

File with extension tbz is intended for Linux (used and tested on Debian and Ubuntu 32/64bit).

File with extension dmg is intended for macOS (used and tested on OSX up to Sierra) XQuartz required, install it from https://www.xquartz.org/

Save the download file to a folder on your computer.

In case that you use windows, extract files in the zip file (e.g. DSU RobinSuperSpikie 18082037.zip)

- 2. Disconnect the fixture from DMX controller.
- 3. If you use the flash cable RS232/DMX, connect a serial port of your computer with DMX input of the fixture by means of the cable.

If you use the Robe Universal Interface, connect a USB port of your computer with the Robe Universal Interface by means of the USB cable and DMX input of the fixture with the DMX output of the Robe Universal Interface via a DMX cable.

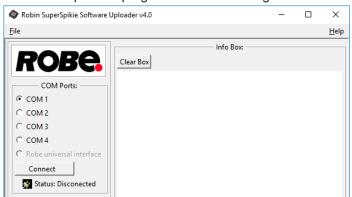

4. Switch the fixture to the update mode (Service --> Updating Software).

Note: If you do not want to continue in the software update, you have to switch off and on the fixture to escape from the updating mode.

We recommend to cancel all running programs on your computer before starting the software update.

5. Double-click the software uploader file (e.g. DSU RobinSuperSpikie 18082037.exe) in

the extracted files. The Software Uploader program will start running.

- 6. Select correct "COM" number if your use a Flash cable RS232/DMX or select "Robe Universal Interface" if you use the Robe Universal Interface/Robe Universal Interface WTX and then click on the "Connect" button.
- 7. If the connection is Okealick the "Start Uploading" button to start software uploading. It will take several minutes to perform software update.
 - If the option "Incremental Update" is not checked, all processors will be updated (including processors with the same software version).
 - If you wish to update only processors with new version of software, check the "Incremental Update box". Avoid interrupting the process. Update status is being displayed in the "Info Box" window.
 - When the update is finished, the line with the text "Fixture is successfully updated" will appear in this window.

In case upload process is interrupted (e.g. power loss), the fixture stays in "Updating mode" and you will have to repeat the software update again.

Another way, how to update software in the fixtures (especially large installation of fixtures) is to use the ROBE Uploader. It is a software for automatized software update of Robe fixtures. It takes advantage of RDM support). For more information please see https://www.robe.cz/robe-uploader/.

7. RDM

This fixture supports RDM operation. RDM (Remote Device Management) is a bi-directional communications protocol for use in DMX512 control systems, it is the new open standard for DMX512 device configuration and status monitoring.

The RDM protocol allows data packets to be inserted into a DMX512 data stream without adversely affecting existing non-RDM equipment. By using a special "Start Code," and by complying with the timing specifications for DMX512, the RDM protocol allows a console or dedicated RDM controller to send commands to and receive messages from specific moving lights.

RDM allows explicit commands to be sent to a device and responses to be received from it. The list of commands for Robin SuperSpikie is the following.

| Parameter ID | Discovery command | SET command | GET command |
|--------------------------|-------------------|-------------|-------------|
| DISC_UNIQUE_BRANCH | * | | |
| DISC_MUTE | * | | |
| DISC_UN_MUTE | * | | |
| DEVICE_INFO | | | * |
| SUPPORTED_PARAMETERS | | | * |
| SOFTWARE_VERSION_LABEL | | | * |
| DMX_START_ADDRESS | | * | * |
| IDENTIFY_DEVICE | | * | * |
| DEVICE_MODEL_DESCRIPTION | | | * |
| MANUFACTURER_LABEL | | | * |
| DEVICE_LABEL | | * | * |
| SENSOR_DEFINITION | | | * |
| SENSOR_VALUE | | | * |
| DISPLAY_INVERT | | * | * |
| DISPLAY_LEVEL | | * | * |

| PAN_INVERT | * | * |
|-----------------------------|---|---|
| TILT_INVERT | * | * |
| DEVICE_RESET | * | |
| DMX_PERSONALITY | * | * |
| DMX_PERSONALITY_DESCRIPTION | | * |
| STATUS_MESSAGES | | * |
| STATUS_ID_DESCRIPTION | | * |
| DEVICE_HOURS | | * |
| PARAMETER_DESCRIPTION | | * |
| ROBE_DMX_INPUT | * | * |
| ROBE_WIRELESS_UNLINK | * | |
| DDM LUDGU DI CO CUI CO | | |

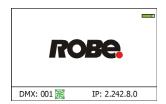

RDM model ID for the Robin SuperSpike is 0x0102.

8. Error and information messages

Information icon

This icon signalizes that cleaning period of the air filters has elapsed and you have to clear air filters and reset the menu item "Elapsed Time".

Errors

Error in the fixture is signalled by the yellow warning icon at the bottom line of the screen:

Touch the warning icon or press the [ESCAPE] button to display error messages. List of error and information messages:

Temper. Sensor Error

The message informs you that the communication betwen the head temperature sensor and the main processor failed.

Tilt Error 1 (Tilt Error 2)

This message will appear after the reset of the fixture if the head's magnetic-indexing circuit malfunctions (sensor failed or magnet is missing) or the stepping motor is defective or its driving IC on the PCB. The head is not located in the default position after the reset.

Pan Error 1 (Pan Error 2)

This message will appear after the reset of the fixture if the yoke's magnetic-indexing circuit malfunctions (sensor failed or magnet is missing) or the stepping motor is defective or its driving IC on the PCB. The yoke is not located in the default position after the reset of the fixture.

Prism Error 1 (Prism Error 2)

The messages will appear after the reset of the prism wheel if this wheel is not located in the default position.

Zoom Error 1 (Zoom Error 2)

The messages will appear after the reset of the zoom module if the zoom module is not located in the default position.

Flower effect Error

The messages will appear after the reset of the flower effect if the rod is not in the default position.

EEprom Error

Hardware error of the EEprom.

Recharge The battery

The battery on the display board needs to be charged. Let the fixture on for cca 6 hrs.

Battery faulty. Replace it.

The battery on the display board is exhausted and should be replaced immediately.

Clean Air Filters

The message informs that the item "Elapsed Time" in the "Fixture Information" menu is at 0 value. Clean air filters and reset this counter.

LEDs Fan 1 Bad (LEDs Fan 2 Bad)

The LED engine cooling fan 1 (fan 2) in the fixture head is disconnected from its control PCB or is faulty and should be replaced.

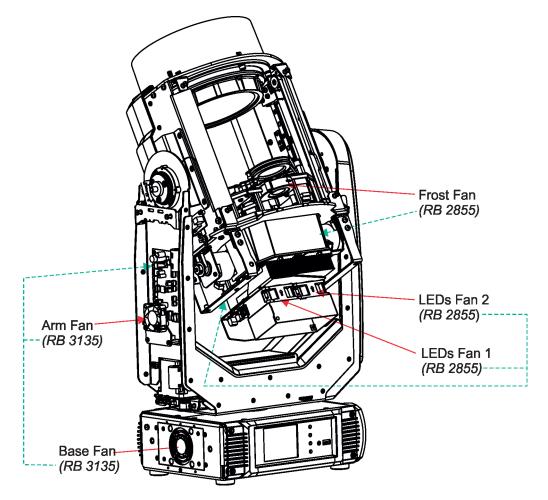

Frost Fan Bad

The small blower in the fixture head is disconnected from its control PCB or is faulty and has to be replaced.

Arm Fan Bad

The small fan in the fixture arm (arm without a tilt lock) is disconnected from its control PCB or is faulty and should be replaced

Positions of all fans (and their control PCBs) in the fixture:

9. Technical Specifications

Electrical

Power supply: electronic auto-ranging Input voltage range: 100-240V, 50-60Hz

Max. power consumption: 330W

Fuse: T 5A/250V ~

Max Inrush Current: < 20A @ 230Vac

Mains input: CE - max. 16A ETL - max. 10A

Mains output: CE - max. 15A ETL - max. 9A

Optic

Light source: RGBW LED multichip

Min LED life expectancy: 20.000 hours (at full load of LEDs)

RGBW/CMY colour mixing +CTO

Halogen lamp effect at whites 2700K and 3200K

Virtual colour wheel

68 preset colours

CTC in range of whites 2700K-8000K Rainbow effect with variable speed

Zoom

Linear motorized zoom: 4°-33° (Flower Effect Off)

3.5°-31°(Flower Effect On) 5°- 42° (with Frost filter)

Strobe

Strobe effect with variable speed (0.3 - 20Hz)

Dimmer

Smooth dimmer from 0 - 100 %

Prism

3-facet circular prism with continuous rotation in both directions

Flower effect

Flower effect rotating in both directions

10 Flower effect macros

Rotating gobos

2 glass gobos can be indexed and rotated in both directions at different speeds Glass gobos: outside diameter= 26.8^{+0,1} mm, image diameter=22.5 mm, thickness=1-3.5 mm, high temperature borofloat or better glass

"Slot&lock" system for easy replacement of gobos

Pan/Tilt

Pan movement range 540° (switchable to 360°) Tilt movement range 360°

Continual pan/tilt rotation
16 bit movement resolution

Automatic Pan/Tilt position correction Remotely controllable speed of pan/tilt

Control

Graphic touch screen for fixture setting and addressing

Gravitation sensor for auto screen positioning

Battery backup of the touch screen

Readout fixture usage, receiving DMX values, temperatures, etc

Built-in analyzer for easy fault finding, error messages

Built-in demo sequences Stand-alone operation

3 user editable programs, each up to 100 steps

Supported protocols: USITT DMX-512, RDM, Art-Net, MA Net, MA Net2, sACN, KlingNet

31 control channels

Wireless DMX/RDM module (optional)

Compliance with USITT DMX-512 (1986 & 1990) and 512-A

Full DMX fidelity and frame integrity

Auto sensing of DMX frame rate and frame size

<5ms DMX latency

Operational frequency range of 2402-2480 MHz

Producer: LumenRadio

Connection

DMX in/Out: 3-pin and 5-pin XLR

Ethernet: RJ 45

Power IN/OUTt: Neutrik TrueOne NAC3PX

Rigging

Mounting points: pair of 1/4-turn locks

Mounting horizontally or vertically via one Omega holder

Temperatures

Maximum ambient temperature : 45° C Maximum housing temperature : 70° C

Distances

Min. distance from flammable surfaces: 0.4 m

Min. distance to lighted object: 2 m

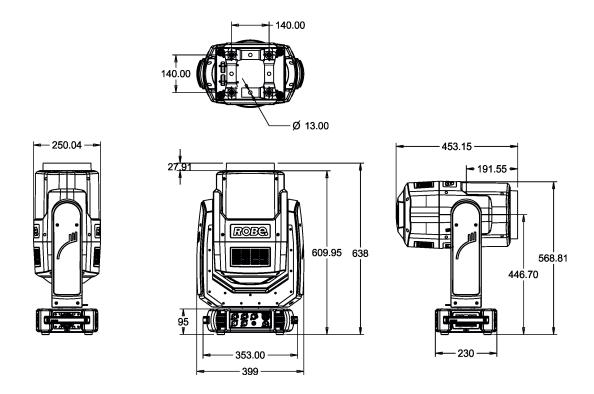

Total heat dissipation

1125 BTU/h (calculated)

Weight (net)

18.5 kg

Dimensions (mm)

Accessories

1x Omega adaptor CL-regular 2 pcs in box (P/N10980033)

Optional accessories

(P/N 1305 2439) Daisy Chain PowerCon TRUE1 In/Out, EU, 2m, indoor (P/N 1305 2440) Daisy Chain PowerCon TRUE1 In/Out, US, 2m, indoor (P/N 13052444) Daisy Chain PowerCon TRUE1 In/Out, EU, 5m, indoor (P/N 1305 2405) Mains Cable PowerCon In TRUE1/Schuko, 2m, indoor (P/N 1305 2406) Mains Cable PowerCon In TRUE1/US, 2m, indoor (P/N 1305 2407) Mains Cable PowerCon In TRUE1/open ended, 2m, indoor (P/N 13052445) Mains Cable PowerCon In TRUE1/CEE 16A, 2m, indoor (P/N 99030100) Upgrade kit CRMX Universal 260 (P/N 17030386) Doughty Trigger Clamp (P/N 99011963) Safety wire 35 kg

10. Maintenance and cleaning

DANGER! Disconnect the fixture from the mains before starting any maintenance work

A soft lint-free cloth moistened with any good glass cleaning fluid is recommended, under no circumstances should solvents be used!

Never use solvents for cleaning the the fixture

It is absolutely essential that the fixture is kept clean and that dust, dirt and smoke-fluid residues must not build up on or within the fixture. Otherwise, the fixture's light-output will be significantly reduced. Regular cleaning will not only ensure the maximum light-output, but will also allow the fixture to function reliably throughout its life. A soft lint-free cloth moistened with any good glass cleaning fluid is recommended, under no circumstances should solvents be used!

Front lens may require weekly cleaning as smoke-fluid tends to building up residues, reducing the light output very quickly. The cooling fans should be cleaned according to the situation (at least annually). The interior of the head and base should be cleaned at least annually using a vacuum-cleaner.

Important! Check the air filter in fixture base periodically and clean before it becomes clogged!

Periodically clean air filter placed in the fixture's base. The air filter cover is fastened by means of magnets. Use a vacuum cleaner, compressed air or you can wash them and put back dry.

After replacing the air filters, reset the elapsed time counter in the menu "Information" (Information--->Air Filters---> Elapsed Time).

More complicated maintenance and service operations are only to be carried out by authorized distributors.

10.1 Replacing the fuse

Before replacing the fuse in the fixture, unplug mains lead!

Before replacing the fuse, unplug mains lead.

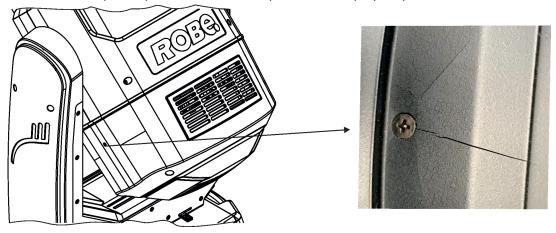

- 1. Remove the fuse holder on the rear panel of the base with a fitting screwdriver from the housing (anti-clockwise).
- 2. Remove the old fuse from the fuse holder.
- 3. Install the new fuse in the fuse holder (only the same type and rating).
- 4. Replace the fuseholder in the housing and fix it.

10.2 Checking plastic parts of the fixture

The plastic parts of the fixture should be checked for damages and beginning cracks at least every two months. If hint of a crack is found on some plastic part, do not use the fixture until the damaged part will be replaced. Cracks or another damages of the plastic parts can be caused by the fixture transportation or manipulation and also ageing process may influence plastic materials.

This checking is necessary for both fixed installations and preparing fixtures for renting. Any free moving parts inside of the fixture or any cracked plastic not sitting properly in place need to be immediately replaced.

Example of crack on the plastic part of the front lens (for illustrative purpose).

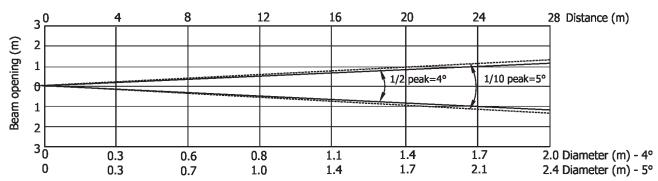

10.3 Disposing of the product

To preserve the environment please dispose or recycle this product at the end of its life according to the local regulations and codes.
